# TANITA innerScan DUAL

Latest TANITA's innovation RD-545 takes body monitoring to the next level, providing professional and amateur sportsmen an instant, pinpoint accurate feedback about their body fat, muscle, and water composition for enhanced training, performance and health.

## Comprehensive measurement

The pioneering *Dual Frequency BIA technology* uses two different bio-electrical impedance frequencies, giving more comprehensive body composition results, as well as your muscle condition - "*Muscle Quality*". With reference to this "*Muscle Quality Score*", you can adjust the amount of exercise to improve muscle strength.

## In-depth Body composition analysis

The addition of the hand electrodes allows the RD-545 to perform a segmental fat and muscle analysis of the arms, legs, and trunk. Altogether 26 whole-body and segmental body composition readings are available in less than 10 secs. It provides you with a more in-depth analysis of your current physical status, which can serve as a training reference to boost performance and avoid injuries.

## TANITA HealthPlanet app

- Instant monitoring of the results and tracking progress
- Easy-to-read charts, graphs for monitoring physical changes and body balance
- Set your own targets and achieve for your personal best
